

Spring Fertilization

We are planning to fertilize all front lawns the week of May 3rd, 2021. This will be an application of slow-release 30-2-12 fertilizer that should feed your turf for many months and provide a quick green up of turf slow to exit dormancy due to the freeze events that occurred in February. Backyards can be fertilized for \$15.00.

Notice:

For best results this product should be watered in lightly within 24-72 hours after application. After application, there should not be any traffic, human or animal, on fertilized areas for 4 hours.

TurfGro 30-2-12 One & Done

- Powered by MORE slow release nitrogen (80%), for gradual feeding of turf all season
- WolfTrax high efficiency iron provides deep, longer-lasting color
- A step UP for consistent growth & even lower cost per "week of green"

Please contact our office at 214-357-6522 or gbaldi@lawnsfordallas.com if you would like your backyard added to the list.
